

WHAT IS CLAIMED IS:

5 1. A data processing apparatus comprising:
data analysis means for extracting data control
information from data provided with the data control
information to be used for restricting various
processes;

data processing means for performing various
processes for the data added with the data control
information;

10 display means for displaying a process function of
each of the various processes to be executed by said
data processing means; and

control means for controlling said data processing
means and said display means in accordance with the
15 data control information extracted by said data
analysis means,

wherein said control means inhibits to execute an
inhibited process in accordance with the data control
information extracted from the data and controls said
20 display means to change a display style of the process
function of each of the various processes to an
inhibition display style.

2. A data processing apparatus according to claim
25 1, wherein said control means controls said display
means to display a notice that the data is provided
with a process restriction.

86

3. A data processing apparatus according to claim 1, wherein said control means controls said display means to display a disabled execution when the inhibited process is selected.

5

4. A data processing apparatus according to claim 1, wherein said control means controls said display means to change a display color as the inhibition display style.

10

5. A data processing apparatus according to claim 1, wherein said control means controls said display means to blink a display as the inhibition display style.

15

6. A data processing apparatus according to claim 1, wherein the data control information includes copyright information or editing inhibition information based upon the copyright information.

20

7. A data processing apparatus according to claim 6, wherein the editing inhibition information includes at least one of color conversion, sharpness, transparency, boundary process, inversion, overlap, rotation, mask, insertion to photo frame, and mixture.

25

8. A data processing apparatus according to claim

87

6, wherein the editing inhibition information is information for stepwise restricting process contents in accordance with an editing inhibition level of the information.

5

9. A data processing apparatus according to claim 8, wherein said control means inhibits to execute an inhibited process in accordance with the editing inhibition level.

10

10. A data processing apparatus according to any one of claims 1 to 9, wherein the data is image data.

15

11. A data supplying apparatus comprising:
storage means for storing and managing data and data control information;
registration means for registering the data and the data control information in said storage means; and
data control information providing means
responsive to a data distribution request for extracting the data control information corresponding to the data and adding the data control information to the data,

20

25

wherein in response to the data distribution request, the data and the corresponding data control information are distributed.

¹¹
~~16.~~ A data processing system comprising:

a data supplying apparatus for distributing data and corresponding data control information in response to a data distribution request; and

5 a data processing apparatus for restricting to executed an inhibited process in accordance with the data control information extracted from the data and controlling display means to determine a display style of a process function of each of various processes,

10 wherein:

said data supplying apparatus comprises: storage means for storing and managing the data and data control information; registration means for registering the data and the data control information in said
15 storage means; and data control information providing means responsive to the data distribution request for extracting the data control information corresponding to the data and adding the data control information to the data; and

20 said data processing apparatus comprises: data analysis means for extracting the data control information from the data provided with the data control information to be used for restricting the various processes; data processing means for performing
25 the various processes for the data added with the data control information; display means for displaying a process function of each of the various processes to be

executed by said data processing means; and control means for controlling said data processing means and said display means in accordance with the data control information extracted by said data analysis means,

5 wherein said control means inhibit to execute an inhibited process in accordance with the data control information extracted from the data and controls said display means to change a display style of the process function of each of the various processes to an
10 inhibition display style.

11 ¹²
12 ~~17~~. A data processing system according to claim
13 ¹¹
14 ~~16~~, wherein said control means controls said display means to display a notice that the data is provided
15 with a process restriction.

16 ¹³
17 ~~18~~. A data processing system according to claim
18 ¹¹
19 ~~16~~, wherein said control means controls said display means to display a disabled execution when the
20 inhibited process is selected.

21 ¹⁴
22 ~~19~~. A data processing system according to claim
23 ¹¹
24 ~~16~~, wherein said control means controls said display means to change a display color as the inhibition
25 display style.

26 ¹⁵
27 ~~20~~. A data processing system according to claim

¹¹
~~26~~, wherein said control means controls said display means to blink a display as the inhibition display style.

5 ¹⁶
 ¹¹ ~~21~~. A data processing system according to claim
~~18~~, wherein the data control information includes
copyright information or editing inhibition information
based upon the copyright information.

10 ¹⁷
 ¹¹ ~~22~~. A data processing system according to claim
~~18~~, wherein the data is image data.

¹⁸
 ¹¹ ~~23~~. A data processing system according to claim
~~18~~, wherein the data control information includes
15 copyright information and a editing inhibition code
based on the copyright information.

¹⁹
 ¹⁶ ~~24~~. A data processing system according to claim
~~23~~, wherein the editing inhibition information includes
20 at least one of color conversion, sharpness,
transparency, boundary process, inversion, overlap,
rotation, mask, insertion to photo frame, and mixture.

²⁰
25 ¹⁸ ~~25~~. A data processing system according to claim
~~23~~, wherein the editing inhibition information is
information for stepwise restricting process contents

91

in accordance with an editing inhibition level of the information.

20 ²¹
25 ~~26~~. A data processing system according to claim
5 ~~25~~, wherein said control means inhibits to execute an inhibited process in accordance with the editing inhibition level.

Sub
a1
10 27. ~~A computer readable storage medium storing a~~
program for executing:

an extracting step of extracting data control information from data provided with the data control information to be used for restricting various processes; and

15 a display step of displaying a process function to be restricted in accordance with the data control information extracted by said extracting step.

20 28. A computer readable storage medium storing a program for executing:

a registration step of registering data and corresponding data control information;

a storage step of storing and managing the data registered at said registration step; and

25 a provision step of extracting the data control information from the data and adding the data control information to the data, in response to a data

12. A data supplying apparatus according to claim 11, wherein the data control information includes copyright information and a process inhibition code based on the copyright information.

5

13. A data supplying apparatus according to claim 11, wherein the data is image data.

10 14. A data processing method comprising:
an extracting step of extracting data control information from data provided with the data control information to be used for restricting various processes; and
a display step of displaying a process function to
15 be restricted in accordance with the data control information extracted by said extracting step.

20 15. A data supplying method comprising:
a registration step of registering data and corresponding data control information;
a storage step of storing and managing the data registered at said registration step; and
a provision step of extracting the data control
25 information from the data and adding the data control information to the data, in response to a data distribution request.

distribution request.

29. A computer readable storage medium according to claim 27 or 28, wherein the data is image data.

5

30. A data supplying apparatus comprising:
distributing means responsive to a data
distribution request for distributing data and control
information for restricting various processes to be
10 performed for the data at a plurality of levels, to a
distribution requesting side.

31. A data supplying apparatus according to claim
30, further comprising storage means for storing the
15 data and control information, wherein in response to
the data distribution request, said distributing means
acquires the data from said storage means, checks a
presence/absence of the control information
corresponding to the acquired data, distributes the
20 acquired data provided with presence/absence
information to the distribution requesting side, and in
response to a control information request after the
distribution, distributes the control information to
the requesting side.

25

32. A data supplying apparatus according to claim
31, further comprising registration means for

registering the data and the control information in said storage means in one-to-one correspondence.

33. A data supplying apparatus according to claim
5 30, further comprising comparing means for comparing registration information supplied from the requesting side with registration information previously stored.

34. A data supplying apparatus according to claim
10 31, wherein the presence/absence information is a data management number.

35. A data supplying apparatus according to claim
15 31, wherein the presence/absence information is a network address.

36. A data supplying apparatus according to claim
20 30, wherein the control information to be distributed is determined in accordance with additional information supplied together with the distribution request from the requesting side.

37. A data supplying apparatus according to claim
30, wherein the data is image data.

38. ~~A data processing apparatus comprising:
data processing means for processing data: and~~

25

Sub
Q2

~~control means for regulating a process to be
executed for the data by said data processing means in
accordance with control information which restricts to
execute the process at a plurality of levels.~~

5

39. A data processing apparatus according to
claim 38, further comprising:

data requesting means for issuing a request for a
distribution of the data to a data supplying apparatus;

10 extracting means for extracting presence
information indicating a presence/absence of the
control information added to the data distributed in
response to the request; and

15 control information requesting means for
requesting for the control information to the data
supplying apparatus in accordance with the extracted
presence information.

20 40. A data processing apparatus according to
claim 39, further comprising display means for
displaying the distributed data, presence information
and control information.

25 41. A data processing apparatus according to
claim 39, wherein said control information requesting
means issuing the request as well as additional
information on the data processing apparatus.

42. A data processing apparatus according to claim 38, further comprising transferring means for transferring registration information on the data processing apparatus to the data supplying apparatus.

5

43. A data processing apparatus according to claim 39, wherein the presence information is a data management number.

10

44. A data processing apparatus according to claim 39, wherein the presence information is a network address.

15

45. A data processing apparatus according to claim 38, wherein the data is image data.

Sub
a3

20

46. A data processing system comprising:
a data supplying apparatus comprising distributing means responsive to a data distribution request for distributing data and control information for restricting various processes to be performed for the data at a plurality of levels, to a distribution requesting side; and

25

a data processing apparatus comprising: data requesting means for issuing a request for a distribution of the data to the data supplying apparatus; data processing means for processing the

~~data; and control means for regulating the data processing to a level represented by the distributed control information.~~

5 47. A computer readable storage medium storing a program executing:

10 a distributing step of distributing, in response to a data distribution request, data and control information for restricting various processes to be performed for the data at a plurality of levels, to a ~~distribution requesting side.~~

15 48. A computer readable storage medium according to claim 47, wherein said distributing step includes a step of acquiring the data from storage means for storing the data and the control information, in response to the data distribution request, a step of checking a ~~presence/absence~~ of the control information corresponding ~~to~~ the acquired data, a step of

20 distributing the acquired data provided with presence/absence information to the distribution requesting side, and a step of, in response to a control information request after the distribution, distributing the control information to the requesting

25 side.

49. A computer readable storage medium according

to claim 48, said program further executes a step of registering the ~~data~~ and the control information in said storage means in one-to-one correspondence.

5

Sub
a4

50. ~~A computer readable storage medium storing a~~
program executing:

a step of processing data; and

10 a step of regulating a process to be executed for
the data by said data processing step in accordance
with control information which restricts to execute the
~~process at a plurality of levels.~~

15

51. A computer readable storage medium according
to claim 50, wherein the program further comprises:

a step of issuing a request for a distribution of
the data to a data supplying apparatus;

20

a step of extracting presence information
indicating a presence/absence of the control
information added to the data distributed in response
to the request; and

25

a step of requesting for the control information
to the data supplying apparatus in accordance with the
extracted presence information.

52. A computer readable storage medium according
to claim 51, wherein the program further comprises a
step of displaying the distributed data, presence

information and control information.

53. A computer readable storage medium according
to claim 48 or 51, wherein the presence information is
5 a data management number.

54. A computer readable storage medium according
to claim 48 or 51, wherein the presence information is
a network address.

10

Sub
a5

55. ~~A computer readable storage medium storing a
program executing:~~

15 a step, to be executed at a data supplying
apparatus, of distributing, in response to a data
distribution request, data and control information for
restricting various processes to be performed for the
data at a plurality of levels, to a distribution
requesting side; and

20 steps, to be executed at a data processing
apparatus, of issuing a request for a distribution of
the data to the data supplying apparatus, of processing
the data, and of regulating the data processing to a
level represented by the distributed control
information.

25

56. A computer readable storage medium according
to any one of claims 47, 50 and 55, wherein the data is
image data.
